

FILTRI ARIA SPORTIVI MOTO

CRF Carbon Racing Filter

Il "C.R.F." Carbon Racing Filter "www.carbonracingfilter.com" è il nuovo filtro aria sportivo della BMC ad alte prestazioni, studiato per le auto stradali e da competizione. **Presenta una struttura** di supporto al 100% in fibra di carbonio ed un **elemento filtrante in cotone**.

Il filtro aria CRF è interamente progettato e prodotto dalla Divisione Corse e dalla Divisione Compositi Avanzati di BMC, reparti impegnati costantemente nello sviluppo dei filtri aria e dei sistemi di aspirazione per il Racing: Formula 1 / MotoGP / World Superbike.

Il CRF nasce dalla massima espressione del know-how BMC, acquisito in più di 10 anni di impegno nel settore Racing, che hanno portato primati e risultati di assoluto rilievo ed incremento delle performance del motore delle supersportive.

Filtro aria: informazioni generali

Il filtro aria ha la funzione di arrestare le impurità presenti nel flusso dell'aria in fase di aspirazione del motore.

L'aria aspirata dal motore deve essere pulita, poiché ogni corpo estraneo può comportare una rapida usura ed una perdita di efficienza del propulsore.

L'aria è un elemento essenziale della combustione: ad una maggior quantità d'aria corrisponde una migliore e più efficace combustione, il tutto per un rendimento superiore del motore. Infatti, l'elemento filtrante in cotone multistrato BMC presenta una perdita di carico (cioè una differenza di pressione tra l'aria prima e dopo il dispositivo di filtrazione) limitata a valori molto contenuti, pur mantenendo elevati valori di efficienza di filtrazione.

Questo si traduce in un aumento sia in potenza che in coppia (CV/NM).

I Filtri Aria

I filtri aria BMC sostitutivi agli originali, sono filtri rigenerabili ad alto rendimento che consentono di migliorare la capacità del flusso d'aria aspirata rispetto ai tradizionali filtri in carta, con evidenti benefici nella qualità della combustione del motore.

I filtri aria BMC sono costituiti da un tessuto multistrato di cotone imbevuto d'olio a bassa viscosità, inserito fra due strutture reticolate di alluminio. Le reti in alluminio sono trattate con resina epossidica in modo da proteggerle dall'ossidazione causata dai vapori del carburante e dall'umidità presente nell'aria.

La scelta di un filtro in cotone BMC porta i seguenti vantaggi:

- **Migliore erogazione di potenza**
- **Migliori prestazioni**
- **Maggiore durabilità del motore**
- **Riduzione consumi**
- **Risparmio di denaro**

Il filtraggio delle impurità avviene mediante i processi di setacciamento e ritenzione, ossia l'intercettazione delle impurità da parte delle fibre di cotone e la loro cattura da parte dell'olio.

Questo procedimento avviene senza l'occlusione del passaggio del flusso d'aria, garantendo in questo modo stabilità nel tempo delle prestazioni del filtro aria.

I filtri aria BMC sono realizzati utilizzando un procedimento chiamato "Full Moulding" che consente di ottenere il caratteristico filtro rosso da un'unica stampata senza richiedere incollaggi negli angoli, causa di facili rotture. La particolare gomma usata nei sistemi di filtrazione BMC è praticamente indeformabile nel tempo e con ottime caratteristiche di adesione a qualsiasi forma di airbox.
